

## CerradinhoBio, the largest in Bioelectricity between plants

On March 06, Portal NovaCana, one of the main communication vehicles in the sugar and ethanol sector, listed 100 plants that generated more energy in 2017 and a CerradinhoBio was in 1st place.

While in 2016 the plant appeared in 15th place among the largest productions in the country, in 2017 its production increased 76.32%, reaching 493.01 MWh, 33% higher than the second place, the largest amount generated by a single plant since 2013.

The increase in production is an investment made in quantity, generating an export capacity of 850 GWh/year, to the installed capacity of 160 MW.

Check below the performance ranking in 2016 and 2017:
