NOTICE TO THE MARKET

JBS ANNOUNCES "TOGETHER FOR THE AMAZON" PROGRAM

- *Program leverages blockchain technology to extend monitoring to indirect livestock suppliers by 2025*
- *Company launches JBS Fund for the Amazon to invest in social and economic development and conservation of the Biome, with an initial contribution of R$ 250 million in the first 5 years*
- *The JBS Fund for the Amazon will be open to third-party contributions, with the ambition to reach R$ 1 billion by 2030.*

JBS S.A. ("JBS" – B3: JBSS3; OTCQX: JBSAY), communicates to its shareholders and the market in general, in accordance with the terms of the Brazilian Securities and Exchange Commission Instruction no. 358, dated January 3, 2002, on this date, the establishment of the **"Together for the Amazon"** program.

For more than a decade, JBS has monitored 100% of its cattle suppliers using strict sustainability criteria, including zero tolerance for deforestation, encroachment on indigenous lands or environmental conservation units, slave labor, or the use of areas embargoed by IBAMA. The company's Responsible Raw Material Sourcing policy, includes a monitoring program consisting of daily, online analysis covering more than 50,000 cattle supplier ranches and farms. Our long-standing commitment to zero deforestation in the Biome has produced results, however, as leaders in our industry, we know we can do more.

Today, JBS announces the launch of the **Together for the Amazon** program, a series of innovative, long-term initiatives that build on the company's legacy of conservation and sustainable development in the Amazon biome. The program will engage industry leaders, civil society, government authorities and environmental stakeholders to propose meaningful actions that will strengthen the value chain and help preserve this critical biome.

The program is consistent with the company's long-term sustainability priorities, including our commitment to combat climate change, which is one of the company's global sustainability targets presented in 2019. The fundamental pillars of the **Together for the Amazon** program are: (i) responsible value chain development; (ii) forest conservation and restoration; (iii) support for local communities in the Amazon; and (iv) scientific research and technology development.

The first pillar consists of three key initiatives. The first of these is the **JBS Green Platform**, a blockchain platform that will enable the Company to track the providers of livestock to its direct suppliers in the supply chain by 2025. The Platform is an unprecedented initiative that will cross-reference data regarding the company's suppliers with livestock transportation data. The new Platform will provide an essential layer of information to enable cattle to be traced throughout their lives and ensure any cattle from producers involved in illegal deforestation cannot enter the JBS supply chain. The system will use an advanced blockchain platform to provide confidentiality and security when accessing producer information and transparent verification and auditing of all transactions. The results of annual independent audits will be made available in the company's annual sustainability report. The company will launch campaigns for engaging with suppliers and

other interested parties to ensure that all suppliers in the supply chain are included in the JBS Green Platform by 2025.

The second initiative is the **sharing of the company's supplier monitoring technology** and its responsible sourcing policy with the value chain, including the entire food industry, livestock producers, family farmers, financial institutions, and the agribusiness sector. The JBS monitoring system in the Amazon has enabled the commercial embargo of suppliers who are non-compliant with the company's procurement policies. Today, the company is announcing its willingness to share this monitoring technology with financial institutions and other companies who share an interest in improving sustainability in the Amazon.

The third initiative will **provide farmers and ranchers with environmental, animal husbandry and legal support** to help producers improve the stewardship of their land. JBS will expand its sustainability educational activities for livestock suppliers and increase investments to develop digital platforms that help ensure properties can gain compliance with the company's policies, as it already does in the states of Mato Grosso and Pará.

The company also announces the creation of the **JBS Fund For The Amazon**, a philanthropic fund that will finance important projects and actions to stimulate sustainable development in the Amazon Biome. The Fund will support important sustainability projects in three principal areas: forest conservation and restoration; socioeconomic development of communities, and scientific research and technology development. JBS will contribute R$ 250 million over the first 5 years, and as much R$ 500 million by 2030.

JBS will invite its stakeholders to contribute to the fund, and has agreed to match third-party contributions. The ambition is for the fund to reach R$ 1 billion by 2030.

The Fund will be headed by Joanita Maestri Karoleski, former CEO of Seara, with the support of a Board of Directors, a Fiscal Council, a Consultative Council and a Technical Committee. The Technical Committee and the Consultative Council will assist in selecting the projects that will receive funding. The Fund will be audited by KPMG. The funding, actions and results of the Fund will be reported and published for transparent public consumption.

"Today, we publicly reiterate our commitment to the sustainability of the Amazon, one of Brazil's most precious natural resources. We hope our actions today will help accelerate the urgent fight against deforestation, while fostering the bio-economy, sustainable agricultural practices and opportunities for social development for the families and communities who call the Amazon home," stated Gilberto Tomazoni, Global CEO of JBS.
