

Petrobras achieves high level of utilization of its refineries

Rio de Janeiro, October 10, 2023 – Petróleo Brasileiro S.A. – Petrobras informs that in September its refining units reached 97% utilization for the second consecutive month. As a result, the Total Utilization Factor (FUT) of the refineries in 3Q23 reached 95.8%, the best result since 2014.

The largest refinery in the country, the Paulínia Refinery (Replan), broke its utilization record, processing an average of 427 mbpd (FUT of 98.4%) in September, totaling 12.8 million barrels of oil processed that month, the most since February 2015.

Also in 3Q23, Petrobras exceeded records in the production of oil products: S-10 diesel reached 464 mbpd compared to 419 mbpd produced in 2Q23, and gasoline reached 423 mbpd, the best result since 4Q13.

The expressive production figures for oil products in the third quarter of this year were achieved by taking into account the high operational reliability and availability of the company's refining units, combined with the efficiency of logistics and market service operations, and supported by robust technology and process digitalization solutions.
