##### 1.1.1.1. Market Evolution

Distributed energy (captive + free + DG) amounted to 18,918 GWh in the 1Q24 (+8.5% vs. 1Q23). It is worth pointing out that Neoenergia Coelba, Neoenergia Cosern and Neoenergia Elektro, which underwent tariff reviews in 2023, had their reference markets adjusted in order to compensate for migrations to distributed generation.

The energy amounts distributed by distributor and by type of customer and market are presented in the tables below:

In the 1Q24, residential consumption increased in all distributors, consolidating 6,609 GWh, +7.4% above that recorded in the 1Q23, mainly influenced by higher temperatures, in addition to the growth in the customer base.

Captive industrial class consumption reduced by 16.4% in the 1Q24 vs. 1Q23. However, when incorporating the free consumption of this class, there is a growth of +4.3% vs. 1Q23

The captive commercial class consolidated 2,319 GWh in the 1Q24, -2.9% vs. 1Q23. Including free consumers in this class, there is an increase of +4.7% vs. 1Q23, mainly due to higher temperatures.

The captive rural class grew by +13.6% vs. 1Q23 and +16.4% when adding the growth of free customers in this class. Highlight on the growth of Neoenergia Coelba (+25.2%) and Neoenergia Elektro (+22.0%).

The other classes (public service, public administration, streetlight, and own use) amounted to 1,845 GWh in the 1Q24, -2.2% vs. 1Q23. Including free consumers from this class, there is growth of +4.6%, with emphasis on the Public Administration class.

### 1.1.1.2. Energy Balance

Total injected energy including DG amounted to 22,102 GWh in the 1Q24, +8,2% vs. 1Q23, due to higher temperatures and the growth in the customer base.

NOTES: (1) Due to the fact that the deadline for calculating the March 2024 loss indicator is after the publication period of this report, the data presented are estimates. The 2023 indicators were adjusted for the final calculation. (2) The table normalizes the impact of ANEEL Normative Resolution 1000/2021, which is null as of the 3Q23. (3) 12-month regulatory limit.

Neoenergia Coelba presented total 12-month losses of 16.12% in the 1Q24, driven by high temperatures in the quarter that made the load 7.6% higher than that of the 1Q23, above the 2023 RTP regulatory limit of 15.42%.

At Neoenergia Pernambuco, total 12-month losses ended the 1Q24 at 18.15%, above the regulatory level of 15.25%. It is worth mentioning the impact of +0.25 p.p. related to the migration of a large customer to the basic grid and +0.62 p.p. from the effect of Non-billed energy.

Total 12-month losses at Neoenergia Elektro ended the period at 7.50%, below the regulatory limit of 7.90%.

Neoenergia Cosern ended the 1Q24 at 8.77%, remaining below its regulatory limit of 10.43%.

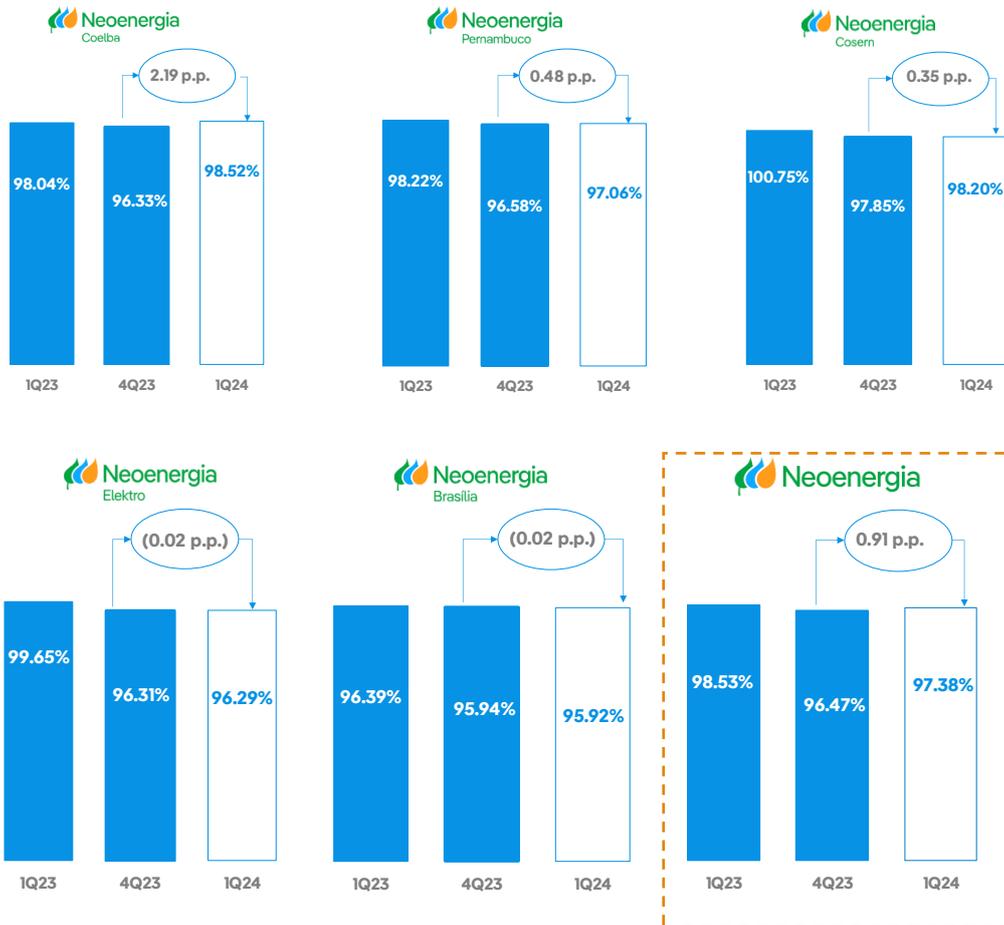

Finally, Neoenergia Brasilia recorded total 12-month losses of 11.15% in the 1Q24, remaining below its regulatory limit of 11.78%.

In the 1Q24, the following actions were taken to fight losses at the 5 distributors:

- i. Carrying out more than 84 thousand inspections, recovering more than 104 GWh;
- ii. Replacement of more than 49 thousand obsolete meters with more modern equipment;
- iii. Regularization of more than 32 thousand illegal connections;
- iv. Survey and Supervision of Streetlight in 19 thousand points, recovering more than 6 GWh; and
- v. Carrying out 43 actions with police support.

### 1.1.1.4. Collection and Default

The charts below display the collection index, which is the ratio between the collection of the last 12 months on past due bills and Neoenergia's 12-month revenue.

Based on the charts above, we see an increase in the consolidated collection rate compared to the 4Q23, reaching 97.38% in the 1Q24 explained by the acceleration of collection actions and greater negotiations.

In the 1Q24, several collection actions were adopted at the 5 distributors with the aim of reducing the default rate and, consequently, improving collection. Among them, we should highlight:

- i. Carrying out 440 thousand supply disconnections through operations in georeferenced concentrations, mapping the location of customers with the highest incidence of default to optimize actions;
- ii. Monitoring of 140 thousand customers' facilities that underwent supply disconnection;
- iii. Negative entries of 2.8 million consumers;
- iv. Protest of more than 85 thousand titles through registry offices and forwarding of notifications;
- v. 4.8 million outsourced collections by collection advisory services;
- vi. Systematic actions for Large Clients and negotiations with Public Authorities;
- vii. Use of new technologies with the aim of providing the option of paying energy bills using a debit or credit card;
- viii. Negotiations with 335 thousand consumers on the digital platform;
- ix. Notification of 505 thousand customers via Whatsapp;
- x. Debt settlements for approximately 18 thousand consumers included in the Federal Government's Desenrola Program.

### 1.1.1.5. DEC and FEC (12 months)

The quality of the energy supply is verified mainly by the indicators DEC – Equivalent Duration of Interruption per Consumer and FEC – Equivalent Frequency of Interruption per Consumer, which measure failures occurring in the distribution network. The 5 distributors are below the regulatory limit for both DEC and FEC.

NOTE: 12-month indicators without supplier. Since the deadline for calculating quality indicators is after the publication period of this report, the data presented are estimates. The 2023 indicators were adjusted for the final calculation.

### 1.1.2. Transmission Lines

<sup>2</sup> RAP approved (2023-2024 Cycle) after Order No. 4,675/2023.

The limit established by the National System Operator (ONS) stipulates availability between 95% and 98% as normal. This indicator measures the quality of service measured by ANEEL through the availability of the transmission system. In the last five years, the group's transmission assets have had availability above the upper limit defined by the ONS, as shown in the table above.

## 1.2. Generation and Customers

### 1.2.1. Renewables

The assets in operation amount to 44 wind farms, 5 hydroelectric plants and 2 solar parks.

#### Actual Installed Capacity

#### 1.2.1.1. Wind farms and solar parks

The Company ended the 1Q24 with 44 wind farms in operation, with an installed capacity of 1,554 MW and 2 solar parks (Solar Complex Luzia), with an installed capacity of 149 MWp.

The 1.7 GW portfolio of wind and solar assets has 51% allocated to the Regulated Contracting Environment (ACR) and 49% to the Free Contracting Environment (ACL), in line with the positioning strategy in the liberalization of the Brazilian energy market.

In the 1Q24, wind and solar energy generated reached 839 GWh, 11% below the 1Q23, due to lower winds in the period. Availability in the quarter was above 98%.

NOTE: On September 17, 2021, Aneel approved an extension of the concession deadlines for hydroelectric plants participating in the Energy Reallocation Mechanism – MRE. On December 13, 2022, Aneel postponed the concession period for HPP Dardanelos by 220 days, by authorization resolution No. 13,297.

### 1.2.2. Thermal Plant

Termopernambuco is a thermal plant included in the PPT (Priority Thermal Program). It has PPAs with Neoenergia Coelba (65MW) and Neoenergia Pernambuco (390MW) lasting until 2024, which guarantee the plant's revenue. It has an installed capacity of 533 MW and assured energy of 504 MW. It is worth remembering that Termopernambuco was the winner of the Capacity Reserve Auction in December 2021, where all its available capacity, 498 MW, was sold at the power price of R\$ 487,412.70 MW/year, with the start of supply on July 1, 2026, ensuring fixed power revenue of R\$ 207 million per year. The contract is valid for 15 years.

In the 1Q24 Termopernambuco generated 61 GWh of energy, while in the previous year there was no generation. The result continues to be preserved by the sales contracts and their cost structure.

(1) Considers Construction Revenue

(2) Considers Construction Costs

As expressed in Technical Guidance OCPC 08, the recognition and measurement of variations between non-manageable costs actually incurred in relation to approved tariffs are always classified in the Operating Revenue line as Amounts Receivable/Returnable from Parcel A and Other Financial Items. Considering that a large part of Parcel A is recorded as energy costs, the isolated analysis of revenue and cost variations can lead to distortions in the interpretation of the results for the period. Therefore, the Company believes it is more appropriate to explain the variations in results based on the Gross Margin.

Neoenergia ended the 1Q24 with Gross Margin without VNR of R\$ 4,239 million (+3% vs. 1Q23), impacted by the effects of: (i) increase in the customer base, (ii) higher volumes; (iii) Tariff Revisions for Neoenergia Coelba and Neoenergia Cosern in April 2023, variation in parcel B +2.5% and +0.25%, respectively; (iv) Neoenergia Brasília's 2023 Tariff Adjustment, effective from October/23 (variation in parcel B: +7.14%); (v) better result of Termopernambuco, and (vi) consolidation of Dardanelos from September 2023. These effects were mitigated by the lower Transmission margin, due to the non-consolidation of the 8 assets of the operation with GIC, which started to be accounted for as equity income from the 4Q23 and wind, due to lower generation, in addition to the Neoenergia Elektro Tariff Review in August 2023, with a variation in parcel B of -3.9% and the Neoenergia Pernambuco Tariff Adjustment in May 2023, which did not show variation in parcel B. The gross margin was R\$ 4,657 million in the 1Q24 (-2% vs. 1Q23). It is worth remembering that in the 1Q23 VNR was positively impacted by a one-off of R\$ 105 million at Neoenergia Coelba and R\$ 40 million at Neoenergia Cosern connected with tariff reviews.

Operating expenses totaled R\$ 1,033 million in the 1Q24 (+6% vs. 1Q23). Normalizing new assets and corporate operations, expenses grew by 4.6% vs. 1Q23, confirming cost discipline.

PECLD was R\$ 158 million in the 1Q24, 10% lower than in the 1Q23, due to better collection performance.

The Generation and Customers business recorded a gross margin of R\$ 546 million in the 1Q24 (+3% vs. 1Q23), positively impacted by: (i) the consolidation of Dardanelos from September 2023, (ii) better result of Termopernambuco due to the adjustment to contracts, (iii) better performance in Solar due to the full start of operations and, (iv) higher margin for the trading company. These effects were mitigated by the reduction in the margin of Wind Power, due to lower generation.

Operating expenses totaled R\$ 122 million in the 1Q24 (+9% vs. 1Q23), mainly due to the consolidation of Dardanelos.

As a result of these variations, EBITDA in the quarter was R\$ 428 million, in line with the 1Q23.

Net profit was R\$ 180 million in the 1Q24 (-4% vs. 1Q23), impacted by higher depreciation, due to the consolidation of Dardanelos and the new parks in operation (Oitis Wind Complex and Luzia Solar Complex).
