SUSTAINABILITY IS IN THE ESSENCE OF EC

Arauco leads in carbon neutrality...

- Arauco was the **first forestry company to certify its carbon neutrality** and has set the goal of being **nature net positive by 2050**
- Carbon neutrality was achieved with a net absorption of 7.2 MtCO₂e in 2021. Calculations **includes Scope 1 + Scope 2 + Scope 3** carbon emissions, offset by sequestration and capture in products
- Arauco has announced further commitments to **reduce CO₂ emissions by one million tones by 2030** (compared to 2019)

...and is responding to new drivers in pulp...

- New uses for pulp are emerging:
 - According to UN, single use plastics represent around 50% of total production of plastics and are facing strong social and regulatory opposition. Material made from pulp is a substitute
 - WEF states that the fashion industry is the second largest consumer of world water supply. Dissolving pulp represents a more friendly alternative than traditional fibers, as cotton, in terms of land and water usage
- The MAPA project is increasing Arauco's wood pulp capacity by nearly 30%
- The Valdivia mill has been converted into dissolving pulp

...while Copec and Abastible are pushing energy transition

- Diversified offer that includes liquefied gas as a transition fuel, renewable energy, green hydrogen and promotion of electromobility
 - Copec has a roadmap to evolve from the distribution of fuels to the distribution of clean energy, setting the **goal of selling a higher proportion of renewable energies than fossil fuels by 2050**
 - Abastible successfully executed the first hybrid model of solar energy - liquefied gas in Chilean mining, becoming an alternative solution to the classic diesel generators, and thus considerably reducing the environmental impact
