

Year-to-date EBITDA reaches R\$3.0 billion

In U.S. dollar, EBITDA was US\$1.9 billion, an increase of 10%

MAIN HIGHLIGHTS:

► Focus on Competitiveness

- ✓ **Year-to-date EBITDA** totaled **US\$1,850 million**, a **10% growth** over the **9M10**, impacted by the **8% average appreciation of the real**. **EBITDA in Brazilian reais** was **R\$3,024 million**, in line with the same period of the previous year.
- ✓ The **PVC** and **butadiene expansion projects**, which are designed to add value to the existing streams and meet continuing market growth, are moving ahead on schedule in order to **become operational in May and July 2012**, respectively.
- ✓ **Braskem** signed an agreement with **Basf** to supply **propylene** for the Brazilian acrylic complex to be built in **Camaçari**, which will allow sales to be redirected from exports to the domestic market.
- ✓ In the second half, in line with its constant pursuit of efficiency and competitiveness, the Company launched a **new fixed-cost reduction program**, aiming to **offset** the effects of **inflation** by around 7%.
- ✓ **Synergies** from **Quattor** acquisition amounted to **R\$309 million**, or US\$189 million, through September 2011. For the year as a whole, synergies are estimated at **R\$377 million**.

► International expansion and diversification of feedstock at competitive costs

- ✓ **Braskem** announced the **conclusion of its acquisition of Dow Chemical's polypropylene business**, thereby strengthening its international expansion strategy and consolidating its position as the largest polypropylene producer in the United States.
- ✓ The Company also moved ahead with the implantation of the **Ethylene XXI Project in Mexico**, whose main advantages are competitive feedstock prices and the opportunity to supply the Mexican market, where there is a shortage of the product.

► Commitment to financial health

- ✓ The **US\$500 million 30-year bond issue due in July 2041** extended the Company's average debt term to 12 years. The average debt term considering only the dollar pegged portion extended to 17 years. The Company's **net debt / EBITDA** ratio in U.S. dollars closed 3Q11 at **2.32x**, versus **2.47x** at the end of 2Q11. In reais, financial leverage was **2.62x**. In both cases, the ratio was impacted by the **19% appreciation of the U.S. dollar** in the quarter.
- ✓ On November 1, 2011, the ratings agency **Fitch** raised Braskem's rating to "BBB-", effectively granting it an **investment grade** status, with a stable outlook. The agency highlighted as positive points the Company's strategic position in the global petrochemical industry, as well as the management of its financial profile and its strong shareholding structure. **Braskem is now considered as investment grade by all three global ratings agencies**.
- ✓ On October 25, 2011, **BNDES approved** a credit limit to the Company in the amount of **R\$2.46 billion**. Braskem will use it in **investment projects** which should occur during the next three years, and is subject to prior approval of the Board of Directors.

▶ EXECUTIVE SUMMARY:

The economic measures adopted by the European countries and the United States were insufficient to add momentum to the global economy in 3Q11. In addition, increasing uncertainties regarding the impact of a slowdown on emerging country growth ended up jeopardizing the commodities market.

In 3Q11, the global petrochemical industry was marked by the continuing volatility of feedstock prices, combined with speculation in the oil market; and the lower basic petrochemical and resin prices, caused by shrinking demand. Resin¹ and basic petrochemical² spreads, except for those of butadiene, fell by around 12% and 17%, respectively, over the previous quarter.

The Brazilian economy, however, continued to show a consistent performance in relation to the global market, with expectations of annual growth of around 3.2%. Brazilian thermoplastic resin demand in the first nine months remained virtually flat over the same period last year, totaling 3.6 million tons. The domestic market was adversely impacted by the increase in manufactured products imports that, in general, were influenced by the benefits of ICMS tax credits conceded when entering the country through some states. This type of regime has already been declared unconstitutional by the Federal Supreme Court, which will have an impact on imports benefiting from these incentives.

Influenced by seasonality, the Brazilian thermoplastic resin market³ grew by 13% over 2Q11 to 1.3 million tons, while Braskem's sales increased by 12% to 857 ktons in line with the upturn in domestic demand. Resin prices⁴ remained in line with international prices, which recorded a 7% fall. Average cracker capacity use remained flat at 86%.

Braskem posted 3Q11 EBITDA of R\$940 million, or US\$568 million, mainly affected by the reduction in the contribution margin, in line with the international trajectory of lower spreads. The EBITDA margin excluding naphtha, condensate and oil resale was 12.5%.

Year-to-date EBITDA totaled US\$1,850 million, 10% up on 9M10, despite the high volatility in the global market, underlining the Company's strong cash generation capacity. In reais, EBITDA amounted R\$3.0 billion, in line with the same period of last year.

Synergies from the acquisition of Quattor's assets totaled R\$309 million in 2011 through September. The main gains were on the industrial and logistics fronts and were chiefly due to: (i) integrated planning by the industrial units; (ii) a reduction of around 20% in the number of grades (ongoing); (iii) the optimization of production and the higher value of cracker products such as butadiene; (iv) gains from international storage and freight rates; and (v) the integrated management of feedstock purchases. The capture of synergies in the period reinforced Braskem's strategy of adding value to acquired assets and pursuing competitiveness.

Braskem closed 3Q11 with net debt of R\$10.8 billion, 11% higher than at the end of 2Q11. Given the net debt's 70% U.S. dollar exposure, financial leverage measured by the net debt/EBITDA ratio increased from 2.30x to 2.62x. In USD, however, declined from 2.47x to 2.32x, in line with the Company's commitment to maintaining its investment grade status.

The effect of the 19% devaluation of the real on Braskem's net dollar exposure had a negative impact of R\$1.6 billion on the 3Q11 financial result. It is important to note, however, that this effect had no immediate impact on the Company's cash position. In fact, it represents the accounting effect of the exchange variation, especially on debt, and will only be disbursed when the debt matures. The average term of the debt is 12 years. Considering only the dollar pegged portion, the average term is 17 years. This factor was the reason for the Company's 3Q11 net loss of R\$1,046 million, which in turn led to a year-to-date net loss of R\$316 million.

With virtually 100% of revenue and 80% of costs directly or indirectly pegged to the variation in the dollar, the Company considers it appropriate to maintain a substantial portion of its debt in the same currency.

¹ 65% PE (USA), 25% PP (Asia) and 10% PVC (Asia)

² 80% Ethylene and propylene, 20% BTX – base Europe

³ Demand was measured internally by the Company, by Abiquim (PVC) and by the Alice import system

⁴ 65% PE (USA) 25% PP (Asia) and 10% PVC (Asia)

Oil market volatility and reduced demand for petrochemicals continue to affect the scenario in the short term. In the medium and long term, however, the outlook remains positive, given that the supply from the new petrochemical capacities is expected to be lower than the demand growth.

PERFORMANCE:

► **EBITDA**

Braskem recorded consolidated EBITDA⁵ of R\$940 million in 3Q11, 18% down on the previous quarter. In U.S. dollar terms, EBITDA fell by 21% to US\$568 million. The increase in sales volume partially offset the margin squeeze between the quarters, which followed the reduction in spreads in the international market. The spreads of resins and the main basic petrochemicals, with the exception of butadiene, narrowed by 12% and 17%, respectively. The EBITDA margin recorded 10.8% in the quarter, 290 bps down on 2Q11, while the ex-resale EBITDA margin stood at 12.5%.

In relation to 3Q10, EBITDA fell by 9% in reais and 4% in dollars. The reduction in sales volume and the 6% appreciation of the real were offset by higher basic petrochemical and resin prices.

Note: see the restatement of net income and EBITDA in Exhibit III.

In 9M11, Braskem’s consolidated EBITDA⁶ came to R\$3,024 million, in line with the same period last year. The increase in basic petrochemical and resin prices partially offset the higher raw material prices, the 8% appreciation of the real and the reduction in sales volume triggered by the power blackout which affected production until mid-May. EBITDA in USD grew by 10% to US\$1,850 million, underlining the Company’s dollar exposure.

⁵ EBITDA can be defined as earnings before the financial result, income tax and social contribution, depreciation and amortization, and revenues and expenses from the sale or impairment of fixed/intangible assets. EBITDA is used by the Company’s management as a measure of performance, but does not represent cash flow for the periods presented and should not be considered adversely affect a substitute for net income or as an indicator of liquidity. The Company believes that in addition to serving as a measure of operating performance, EBITDA allows for comparisons with other companies. Note however that EBITDA is not a measure established in accordance with international financial reporting standards (IFRS) and may be defined and calculated differently by other companies.

⁶ We began to consolidate Cetrel’s figures in full as of 2Q11. EBITDA in the first nine months therefore includes Cetrel’s figures retroactive to January 2011.

Operational, economic and financial factors impacting EBITDA performance:

Braskem's thermoplastic resin sales in the domestic market increased 12% to 857 ktons, in line with the upturn in domestic demand, while prices⁷ followed those on the international market, which fell by around 7%.

During the quarter, imports of polyolefins (PE and PP) and PVC accounted for 29% and 35% of the domestic market, respectively, reflecting: (i) the domestic shortfall of PVC, whose imports totaled around 110 ktons; and (ii) the continuing opportunistic entry of imports through ports that granted ICMS tax credits (reaching 9% in Santa Catarina), which has already been judged unconstitutional by STF (Federal Supreme Court), added to the appreciation of the real. The volatility of the exchange rate as of the second week of September may affect import decisions in the fourth quarter, given that such decisions are normally taken around 45 days or more prior to the product's scheduled date of arrival at the destination port.

Braskem's year-to-date thermoplastic resin sales (PE, PP and PVC) in the domestic market fell by 6% over 9M10 to 2.4 million tons, due to: (i) the reduced capacity utilization rate, which was affected by the blackout that impacted operations in the Northeast of Brazil in the first quarter; and (ii) higher imports due to the appreciation of the real and the ICMS tax credit benefits granted by certain ports. On the other hand, resin prices recorded double-digit growth, in line with the international market.

► Polyolefins

Brazilian Market: estimated polyolefin (PE and PP) demand was 1,010 ktons in 3Q11, 11% up on the previous quarter and 4% less than the 1,050 ktons recorded in 3Q10. In the nine months of 2011, the market reached 2.8 million tons, in line with the same period of 2010.

Domestic Sales: Sectors related to agribusiness, consumer goods and infrastructure pushed the sales in the third quarter, when volume climbed 12% over the previous quarter. The electro-electronics segment also had good performance. In comparison with 3Q10, sales volume fell by 10%.

Exports: exports totaled 389 ktons, explained by (i) higher output than in 2Q11; (ii) the recovery of sales in captive markets; and (iii) windows of opportunity in other markets, such as Asia.

Production: production totaled 1,047 ktons, 7% more than in 2Q11, due to higher PP capacity utilization following the scheduled maintenance shutdown that impacted the previous quarter. In relation to 3Q10, output fell by 4%, due to the scheduled maintenance shutdown of the Rio de Janeiro cracker in July 2011.

Year-to-date: total sales remained virtually flat over 9M10, chiefly due to higher exports to markets where the Company has qualified sales. Production dipped by 2%, influenced by scheduled and unscheduled shutdowns in the period.

Performance (tons) POLYOLEFINS	3Q11 (A)	2Q11 (B)	3Q10 (C)	Change% (A)/(B)	Change% (A)/(C)	9M11 (D)	9M10 (E)	Change% (D)/(E)

⁷ 65% PE (USA), 25% PP (Asia) e 10% PVC (Asia)

► **Vinyls**

Brazilian Market: PVC demand in the third quarter was estimated at close to 320 ktons, around 20% up on 2Q11 and 3Q10. In the nine months of 2011 the market reached 830 ktons, 6% up year-on-year.

At the end of September, CAMEX (The Brazilian Foreign Trade Chamber) revised the application of antidumping rights over U.S. imports to an *ad valorem* tariff of 16%, replacing the moving formula previously in force, whose calculation was based on ICIS publication. The change in the antidumping right application came from the need of recovering the effectiveness of the applied right.

Domestic Sales: Braskem’s sales volume increased by 12% over the previous quarter, limited by current production capacity. In the same period, caustic soda sales moved up by 16%. In comparison with 3Q10, PVC sales increased by 3%, while soda sales fell by 12%, impacted by the reduction in the period utilization rate.

Production: with a capacity utilization rate of 94% in the period, total PVC output increased 13% over 2Q11 and reached 121 ktons. In the case of soda, the recovery in the utilization rate pushed up output by almost 60%. In comparison with 3Q10, PVC and caustic soda production both fell by 3%.

Year-to-date: In 9M11 PVC and caustic soda sales declined by 4% and 14%, respectively, over 9M10. In both cases, the reduction was due to the power blackout, which jeopardized the Company's operations in the Northeast of Brazil in 1Q11, with a partial impact until midway through the second quarter.

Performance (tons) VINYLs	3Q11 (A)	2Q11 (B)	3Q10 (C)	Change% (A)/(B)	Change% (A)/(C)	9M11 (D)	9M10 (E)	Change% (D)/(E)

► **Basic Petrochemicals**

Ethylene and propylene: third-quarter ethylene and propylene sales totaled 226 ktons, in line with the previous quarter, explained by the period window of opportunity for ethylene exports. Following the international trajectory, average ethylene and propylene prices fell by 9% and 11% over 2Q11, respectively. In relation to 3Q10, sales volume declined by 4%, although this was offset by the 20% upturn in prices.

Butadiene: sales volume grew 9% over 2Q11, reflecting better volume production and the continuing healthy performance of the domestic and international markets. Prices maintained their upward trend, increasing by 25%. Compared to 3Q10, sales remained virtually flat while prices climbed by 71%.

BTX: sales increased by 12% over 2Q11, reflecting the return to normal production levels by clients who had undergone maintenance shutdowns. In relation to 3Q10, sales dropped by 11%, reflecting lower production, offset by higher prices, which rose around 30% in line with the international market.

In general, 9M11 sales recorded a downturn over the same period last year, impacted by reduced product availability as a result of the blackout that hit operations in the Northeast, as explained previously. However, this was offset by higher average prices, which presented double digit growth.

Performance (tons) BASIC PETROCHEMICALS	3Q11 (A)	2Q11 (B)	3Q10 (C)	Change% (A)/(B)	Change% (A)/(C)	9M11 (D)	9M10 (E)	Change% (D)/(E)

BTX* - Benzene, Toluene, Orthoxylene and Paraxylene

► International Business

U.S. Market: scheduled maintenance shutdowns fueled PP demand until mid-August. On the other hand, expectations of a continuous reduction in propylene prices, with a subsequent reduction in resin prices, ended up influencing demand throughout the quarter.

Sales: the International Business Unit, represented by **Braskem America**, recorded sales volume of 206 ktons in the quarter, 12% up on 2Q11 mainly due to greater product availability in the third quarter. In relation to 3Q10, sales fell by 9% due to reduced output.

Production: 3Q11 production totaled 198 ktons, an increase of 6% compared to the previous quarter, reflecting the recovery in the utilization rate after the scheduled maintenance shutdown at the LaPorte site. Production fell by 15% in relation to 3Q10, due to the closure of one of LaPorte's production lines, given its low competitiveness and the fact that it was already operating at reduced rates.

Year-to-date: 9M11 sales totaled 591 ktons, 6% less than the same period last year, reflecting lower product supply, as explained previously.

Performance (tons) INTERNATIONAL BUSINESS	3Q11 (A)	2Q11 (B)	3Q10 (C)	Change% (A)/(B)	Change% (A)/(C)	9M11 (D)	9M10 (E)	Change% (D)/(E)
Sales								
PP	206,387	184,744	227,954	12	(9)	590,649	630,642	(6)
Production								
PP	198,008	187,577	233,765	6	(15)	580,506	631,036	(8)

The capacity utilization rates of Braskem’s main products are shown below:

► **Net Revenue**

3Q11 consolidated net revenue totaled US\$5.3 billion, in line with the previous quarter. The increase in basic petrochemical and resin sales volume partially offset the lower prices. In reais, net revenue came to R\$8.7 billion, 4% more than the previous quarter.

In relation to 3Q10, consolidated net revenue in dollars grew by 23%, reflecting higher prices, which accompanied the upward price trend in the international markets. In reais, consolidated net revenue grew by 15%, impacted by the average 6% period appreciation of the local currency.

In 9M11, consolidated net revenue totaled US\$15.0 billion, or R\$24.5 billion, 28% and 17% up, respectively, on 9M10, reflecting the period price upturn.

Note: see results by business segment in Exhibit X.

Export revenue in the quarter totaled US\$1.9 billion (35% of net revenue), 9% higher than in 2Q11, mainly due to continuing resale opportunities totaling US\$710 million and the increased supply of polyolefins and certain cracker co-products, especially butadiene and toluene, whose total revenue climbed by 29%. In comparison with 3Q10, export revenue grew by 51% from US\$1.2 billion (29% of net revenue).

Resale (US\$ million)

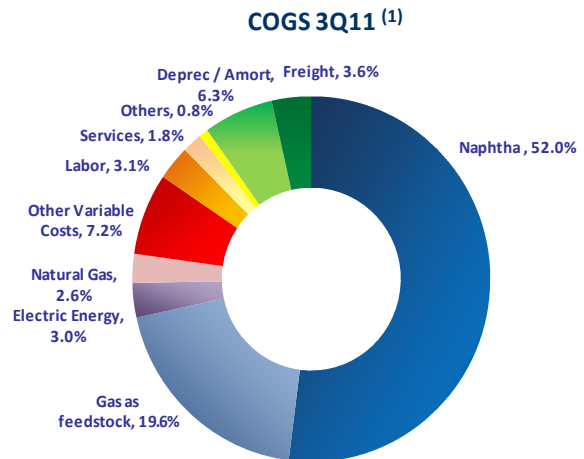

In 9M11, export revenue came to US\$4.9 billion (33% of net revenue), 59% higher than in 9M10, chiefly due to higher resale volume, associated with the upturn in international prices, which recorded double-digit growth.

► **Cost of Goods Sold (COGS)**

Braskem's cost of goods sold (COGS) came to R\$7.8 billion in 3Q11, 9% up on the previous quarter, basically reflecting the period increase in sales volume.

The ARA naphtha price stood at US\$953/ton in the quarter, 4% down on the US\$991/ton recorded in 2Q11, but less than the decline in resin and basic petrochemical prices, which fell by an average 7% and 10%, respectively. The three-month moving average, which is a reference for domestic supply, was US\$969/ton, virtually in line with the previous quarter (US\$962/ton). The 3% appreciation of the U.S. dollar had a negative impact of R\$177 million on COGS. Braskem acquires the bulk of its naphtha feedstock from Petrobras and the remainder is imported directly from suppliers in Argentina, Mexico, Venezuela and countries in North Africa.

(1) Does not include naphtha / condensate / crude oil processing and Quantiq costs

Regarding average gas prices, the benchmark ethane price (Mont Belvieu) remained flat over 2Q11 at US\$78 cts/gal, while propane prices grew by 3% to US\$154 cts/gal. The average USG propylene price fell by 12% to US\$1,690/ton, impacted by the limited supply of the product and dwindling international demand.

In relation to 3Q10, COGS was 20% higher, mainly reflecting the increase in feedstock prices – the ARA naphtha price climbed by 45% between the two periods.

In 9M11, COGS came to R\$21.3 billion, 20% up on the R\$17.7 billion recorded in the same period last year, reflecting the higher feedstock prices, partially offset by the exchange variation. The ARA naphtha price averaged US\$950/ton in 9M11, 38% higher than the 9M10 average of US\$687/ton. Benchmark ethane and propane prices (Mont Belvieu) increased by 26% and 30%, respectively, over the same period last year to US\$74 cts/gal and US\$147 cts/gal, while USG propylene prices climbed by 33% to US\$1,760/ton.

► Selling, General and Administrative Expenses (SG&A)

In 3Q11, Selling, General and Administrative expenses totaled R\$495 million, 5% higher than in 2Q11 and R\$16 million, or 3%, more than in 3Q10.

Selling Expenses amounted to R\$216 million in the 3Q11, up 16% from the previous quarter, mainly due to expenses associated with the increase in sales volume, such as product storage, freight and leasing. In comparison with 3Q10, selling expenses grew by 8%, reflecting higher external freight charges, which followed the upturn in oil prices.

General and Administrative Expenses totaled R\$279 million in the quarter, R\$7 million lower than in 2Q11, mainly reflecting the R\$13 million reduction in expenses with third parties, advertising and auditing, which was partially offset by the R\$8 million increase in expenses with advisory services related to sustainability and innovation, among others. In relation to 3Q10, G&A expenses remained stable.

Year-to-date SG&A expenses totaled R\$1.5 billion, 5.7%, or R\$78 million, up on 9M10, primarily due to higher depreciation, higher labor costs associated with a collective negotiation agreement and higher expenses from third-party advisory services, as mentioned above.

► Net Financial Result

The 3Q11 net financial result was an expense of R\$2,064 million, versus an expense of R\$79 million in 2Q11, mainly due to the 19% period appreciation of the U.S. dollar⁸ against the real.

Since Braskem has net exposure to the USD (more dollar-pegged liabilities than dollar-pegged assets), any change in the exchange rate has an impact on the book financial result. On September 30, 2011, this net exposure was composed of: (i) in the operation, 42% of supplier accounts, partially offset by 47% of accounts receivable; and (ii) in the capital structure, 70% of net debt. Given its heavily dollarized operational cash flow, Braskem considers this exposure to be adequate. Virtually 100% of its revenue and most of its costs are directly or indirectly pegged to dollar.

It is worth noting that the negative foreign exchange effect of R\$1,620 million does not have a direct cash impact in the short term. This amount represents foreign exchange accounting impacts, especially on the Company's debt, which will only be disbursed when the debt, which has a total average maturity term of 12 years and 17 years in dollars, matures. Given Braskem's dollar-pegged cash flow profile, the appreciation of the USD will have a negative accounting effect in the short term, but a net positive impact on cash flow in the medium term.

Excluding the effects from foreign exchange and monetary variation on the balance-sheet accounts exposed to the dollar, the 3Q11 net financial result was an expense of R\$379 million, R\$13 million lower than in 2Q11. The financial expense in the quarter was also affected by the exchange impact on the outstanding debt.

On the same basis, the year-to-date net financial result was an expense of R\$989 million, which represents a R\$96 million decline from the same period last year.

The following table gives a breakdown of Braskem's net financial result on a quarterly and annual basis.

⁸ On September 30, 2011, the Brazilian real/U.S. dollar exchange rate stood at R\$ 1.8544/US\$ 1.00.

Million of R\$	3Q11	2Q11	3Q10	9M11	9M10
Financial Expenses	(2,531)	(135)	164	(2,801)	(1,426)

* Non-recurring expenses classified under Other Expenses

In order to protect its cash flow and reduce volatility in the financing of its working capital and investment programs, Braskem adopts market and credit risk management procedures in line with its Financial Management Policy and Risk Management Policy. In September 2011, the Company had five derivative transactions for hedging purposes with maturities, currencies, rates and amounts that are perfectly adequate for the assets and liabilities being protected. In any given scenario, gains or losses in hedge positions will be offset by gains or losses in the protected assets and liabilities.

► Net Income

Braskem posted a net loss of R\$1,046 million in 3Q11, mainly due to the R\$2.1 billion impact of the net financial expense, affected by the depreciation of the real, as explained above, and reduced cash flow capacity generation in the period. In the nine months of 2011, the Company reported a net loss of R\$316 million.

► Cash Flow

Braskem's **operating cash flow** adjusted for financial investments totaled R\$1,431 million in 3Q11, R\$384 million higher than the R\$1,047 million recorded in the previous quarter. Working capital had a positive impact of R\$773 million in 3Q11, mainly due to: (i) the positive variation of R\$1,303 million in the Suppliers account, explained by the period exchange variation; (ii) the reduction in Inventories, with an impact of R\$218 million; partially offset by (iii) the R\$647 million increase in Accounts Receivable, influenced by higher sales volume, the exchange variation and other asset accounts.

R\$ Million	3Q11	2Q11	3Q10	9M11	9M10
Operating Cash Flow Adjusted	1,431	1,047	1,042	3,053	2,761
Interest Paid	(145)	(248)	(253)	(566)	(699)
Income Tax and Social Contribution	(24)	(30)	(5)	(72)	(27)
Investments	(648)	(511)	(311)	(1,484)	(2,358)
Free Cash Flow Adjusted	614	258	472	931	(323)

Adjusted free cash flow was positive by R\$614 million, R\$356 million higher than in 2Q11, chiefly due to the working capital contribution, as explained above, and the reduction in 3Q11 interest rates, partially offset by higher disbursements with investment activities, especially related to expansion projects.

In 9M11, free cash flow was positive by R\$931 million, a substantial R\$1,254 million more than the same period last year, which was impacted by outflow of R\$1.4 billion for the acquisition of the assets of Quattor, Polibutenos, Unipar Comercial and Sunoco Chemicals. The Interest Paid line fell by 19%, reflecting the reduced cost of debt due to the restructuring of the Company's debt profile.

► Capital Structure and Liquidity

On September 30, 2011, Braskem registered gross debt of US\$7,673 million, down 3% from the end of the previous quarter, 65% of which pegged to the U.S. dollar. On the other hand, cash and financial investments increased by 10% to US\$1,872 million. It is worth noting that this high cash level returned to normal at the beginning of October, following the disbursement of US\$323 million for the acquisition of Dow's PP business. Braskem also maintained its strategy of optimizing cash carrying costs by contracting two stand-by loans totaling US\$600 million that do not include any restrictive covenants on withdrawals during times of Material Adverse Change (MAC Clause). Only prime banks with low default rates (credit default swap) and high credit ratings participated in the operations.

As a result, Braskem's consolidated net debt in USD contracted by 6% over 2Q11 to US\$5,801 million. In BRL, however, net debt moved up by 11%, due to the 19% period appreciation of the dollar. 70% of the net debt is dollar-pegged.

Given the net debt's U.S. dollar exposure, average financial leverage measured by net debt/EBITDA ratio, fell from 2.47x in 2Q11 to 2.32x in 3Q11, in dollar terms, in line with the Company's objective of maintaining leverage at around 2.5x. In reais, the ratio was 2.62x, up by 14%, mainly reflecting the period appreciation of the dollar.

On September 30, 2011, the average debt term was 12.4 years, versus 10.3 years at the close of June 2011. Considering only the dollar portion of the debt, the average term was 17.2 years on September 30, mainly due to the US\$500 million bond issue at the end of July, due in 2041, with a yield of 7.25% p.a. and a coupon of 7.125% p.a. This was Braskem's first 30-year issue, which gave it access to a new profile of investor.

The Company's average debt cost on September 30 was 6.1% in dollars and 88.2% of the CDI overnight rate in reais.

The following charts present Braskem's gross debt by category and indexer.

The following chart shows the Company's consolidated amortization schedule on September 30, 2011.

Only 11% of Braskem's total debt will mature in the next 15 months and its continued high liquidity, excluding the portion of cash allocated to the acquisition of Dow's PP business in early October, ensures that its cash and cash equivalents cover the payment of obligations maturing over the next 27 months or 30 months considering stand by credit line.

► **INVESTMENTS:**

In line with its commitment to capital discipline and making investments with returns above their cost of capital, Braskem invested R\$1,349 million in 9M11 (not including capitalized interest), 33% higher than the R\$1,011 million invested in 9M10.

Most of this amount was invested in capacity expansion projects. The project to build the PVC plant in Alagoas, which is scheduled for start-up in May 2012, absorbed R\$348.5 million, while the Butadiene⁹ project absorbed R\$62 million.

The Company invested R\$105 million in Ethylene XXI project, in Mexico, R\$16 million more than the initial annual estimate of R\$89 million. Due to the attractiveness of the project, and seeking to ensure its commissioning within the stipulated deadline, the additional expenditure was allocated to anticipating ground preparations, due to the approach of the rainy season in the region, and the advanced purchase of equipment with lengthy manufacturing and delivery periods.

Braskem also spent R\$319 million on scheduled maintenance shutdowns, in line with its determination to keep its plants operating with high levels of operational efficiency and reliability. These investments were mainly allocated to (i) the Rio de Janeiro unit (formerly Riopol), where a 30-day maintenance stoppage was concluded at the end of July; and (ii) the shutdown at the Triunfo unit, in Rio Grande de Sul, which began at the end of October and is expected to last for 20 days. A part of these investments were already disbursed throughout 9M11.

► **SYNERGIES:**

Braskem remains focused on improving the operational efficiency of the assets acquired, and various initiatives have been initiated to capture the synergies from the transaction.

Synergies totaling R\$309 million in annual and recurring EBITDA were captured in 9M11. The main gains were on the industrial and logistics fronts and primarily resulted from: (i) integrating planning by the industrial units; (ii) a reduction of around 20% in the number of grades (ongoing); (iii) the optimization of production and cracker products such as butadiene; (iv) gains from international storage and freight charges; and (v) the integrated management of feedstock purchases, such as naphtha and propylene.

In terms of the Company's Income Statement, around 70% of the synergies are allocated to the Revenue and Production Costs lines.

Investments (R\$ million)

R\$ million

R\$ million

⁹ Estimated investments of R\$1,644 million for 2011 do not include the Butadiene project, since it is a project in which the Company received advances from clients and do not impact the Company leverage.

For 2011 as a whole, Braskem expects to capture R\$377 million in annual and recurring EBITDA, rising to R\$495 million in 2012.

► ACQUISITION OF THE POLYPROPYLENE BUSINESS

On September 30, 2011, Braskem announced the conclusion of its acquisition of Dow Chemical’s polypropylene business, which was disclosed to the market on July 27.

The business consists of four industrial plants, two of which in the United States and two in Germany. The U.S. assets are located in Freeport and Seadrift, in Texas, and have a combined annual production capacity of 505 ktons, increasing Braskem’s annual PP production capacity in that country by 50% to 1,425 ktons. The German assets are located in Wesseling and Shckopau and have a joint annual production capacity of 545 ktons.

Operating performance of the acquired assets:

Former DOW PP Business	3Q11 (A)	2Q11 (B)	3Q10 (C)	Chg. (%) (A)/(B)	Chg. (%) (A)/(C)	9M11	2010
Net Sales (US\$ million)	453	513	374	-12%	21%	1,423	1,520
Volume (kton)	243	245	246	-1%	-1%	736	980
Production (kton)	233	263	263	-11%	-11%	756	999

Note: these numbers were consolidated based on data collected during due diligence and have not been audited.

The transaction was approved by the U.S. and European antitrust authorities – the U.S. Federal Trade Commission and the Antitrust Divisions of the U.S. Department of Justice and the European Union. The acquisition of these assets strengthens Braskem’s international expansion strategy and consolidates its position as the largest polypropylene producer in the United States.

Braskem paid US\$323 million for the equity. For accounting effects, the date of acquisition is October 03, 2011. From this date on, the result of acquired business is consolidated in Braskem figures.

► PROJECT PIPELINE:

Consistent with its medium and long-term strategy, which focuses on Brazilian market growth, the diversification of its energy matrix, its internationalization process and the consolidation of its biopolymer market leadership, Braskem has the following projects in its pipeline:

► PVC Expansion

The project to expand PVC capacity by 200 ktons/year, involving total investments of US\$470 million and an estimated NPV of US\$450 million, is scheduled for start-up in May 2012. In 9M11, activities were reorganized, thanks to the progress of the project. Investments in 2010 and 2011 to date total R\$432 million and should reach R\$489 million by the end of this year, which should be offset in other fronts. The reorganization of activities will not alter the total investment estimate or the scheduled conclusion dates. The goal is to meet growing domestic demand for PVC, whose demand increased by around 6% year-on-year in 9M11.

Construction was more than 61% complete at the end of the quarter, as planned, and had accrued more than 4.4 million man-hours with no accidents of any kind (with or without sick leave). The main items of equipment, ordered from global suppliers, are already in the advanced stage of manufacture.

To finance the project, in addition to the line of up to R\$525 million already approved by the BNDES with a total term of 9 years and 88% denominated in Brazilian reais at the TJLP+1.46%, Braskem also received approval for a financing line of R\$200 million from BNB, to be amortized over 12 years at 8.5% p.a.

► Butadiene Project

Braskem will invest approximately R\$300 million to build a new butadiene plant, using the crude C₄ stream. The project involves the installation of a new line with a capacity of 100 ktons/year and absorbed investments of R\$62 million in 9M11. The Company also signed product pre-sale agreements that have resulted in advances of around R\$200 million to date.

Construction is 42% complete and on-schedule, with no accidents of any kind. The spherical tanks that will be used to store the butadiene are already in the advanced stage of assembly. The project is scheduled for start-up in July 2012. Braskem's butadiene supply will increase by around 30% to 446 ktons/year. On the international market, 9M11 butadiene prices rose by approximately 60% in relation to the same period last year.

► **Mexico Project – Ethylene XXI**

The integrated project in Mexico in which Braskem and IDESA are participating jointly with respective interests of 65% and 35%, involves the production of polyethylene resins using ethane as a feedstock and is based on an ethane supply agreement with PEMEX-Gás for the supply of 66,000 barrels/day over 20 years, based on benchmark Mont Belvieu prices. The project will also diversify Braskem's feedstock matrix, increasing the competitiveness of its assets.

Fixed investments are now estimated at around US\$3.0 billion, due to inflation and a more detailed analysis of the investments with the progress of FEED (Front End Engineering Design), which has been developed by the consortium responsible for constructing the project, comprising Technip, ICA Fluor and Construtora Norberto Odebrecht (CNO). The total investment will be financed under the project-finance model (70% debt/30% equity). Conclusion of the works and the start-up of operations are scheduled for the first half of 2015.

The following events in 3Q11 deserve mention: (i) the beginning of ground preparation works on the site of the future industrial complex, given soil conditions and rainfall in the region; and (ii) the advanced purchase of equipment with lengthy manufacturing and delivery periods.

There is a shortage of polyethylene in the Mexican market, which is expected to record 5% growth this year to around 1.9¹⁰ million tons, 70% of which imported. This represents a major future sales opportunity for the Company, which is committed to developing and perpetuating the local industry.

Sumitomo Bank is the project's financial advisor and the Company has already received formal manifestations from other financial institutions interested in supporting the project.

Braskem is still in the due diligence phase of structuring the project finance, which should be concluded in the first quarter of 2012, with construction beginning in the same year. The financial institutions – multilateral agencies, export credit agencies and development banks – involved in this process, which includes social and environmental, technical, legal, market and insurance due diligence, have hired independent consulting firms who are specialized in their respective areas and who are working in a coordinated manner with the project team in order to finalize the process.

► **Other MoUs in Latin America**

Braskem also has similar projects in less advanced phases in Peru, Bolivia and Venezuela. In the case of Peru, Braskem, Petrobras and PetroPeru concluded, in 2010, the analysis phase and the technical design of the petrochemical complex project to be installed in southern Peru, with polyethylene production capacity estimated at approximately 1.0 million tons/year. Braskem has already inaugurated an office in the city of Lima to support the team involved in the project and the commercial team that is already working in the country.

¹⁰ Source: Plastic Association (Mexico)

► Green Polypropylene Project

In keeping with its strategy of becoming the world leader in sustainable chemicals, Braskem is developing a project to produce Green Polypropylene with an annual production capacity of at least 30 ktons of green propylene. The basic engineering studies should be concluded in 2011, with start-up expected in the second half of 2013. The project is still pending approval by the Board of Directors.

► Innovation Pipeline - Product Development

New polypropylene resin for the non-woven market

Braskem has launched a new PP resin for the non-woven market. The new technology ensures the best flow conductor and barrier properties (including a physical barrier against micro-organisms such as bacteria), as well as greater uniformity in the non-woven layer. Its main applications are in clothing, surgical gowns and masks, diapers and sanitary napkins.

New resin for flexible PVC applications

Developed for use in the pharmaceutical, food and hospital industries, the new resin provides greater thermal stability and processability, in line with the strict technical and regulatory requirements in these segments.

Polyethylene to improve surface finishing

New resins have been launched for use in low-volume blow molding packaging, mostly for cleaning material, cosmetics and surfactant containers. With excellent surface finishing, the new resins ensure a high level of brightness and special optical properties, as well as excellent balance between rigidity and impact resistance and high stress-cracking resistance. One of the resins also presents extremely high rigidity and low permeability to gases and vapors, essential properties for pharmaceutical, dairy product, juice and alcohol packaging

PVC House

In association with DuPont and Global Housing, Braskem has developed a new residential construction concept at an affordable cost. The system permits the construction of houses with complete finishing on an industrial scale. As a result, a unit can be built in only a week. The project, called PVC Concrete House, has already been approved by the Caixa Econômica Federal for the construction of 1,000 houses throughout Brazil.

► BRASKEM'S COMPETITIVE ADVANTAGES:

► VISIO Program

In 3Q11, Braskem implemented more than 50 initiatives focused on improving management, developing new businesses or improving the operational efficiency of its clients. We are also developing a further 300 such initiatives, involving not only our commercial team, but also the most diverse areas of the Company, aimed at adding value to our clients.

An example of these important initiatives is the support to our client Borealis in the contracting and purchase of energy. The exchange of knowhow among power specialists from both companies allowed Borealis to enjoy a significant power cost reduction.

In a partnership with Mabe, Braskem replaced the material used in covers and panels of Continental line washers for Polypropylene, allowing for a production cost reduction to the Client.

With the progress of the VISIO program, Braskem is reaffirming its commitment to developing and strengthening Brazil's plastics production chain.

► Solutions for a More Sustainable Life

Aiming to strengthen the business community's contribution to increasing society's commitment to sustainability, Braskem has taken an active part in the discussions of the National Commission for Rio+20 – the United Nations Conference on Sustainable Development, which will take place in Brazil in 2012, in association with the Business Council for Sustainable Development (CEBDS) and the Brazilian Global Compact Committee (CBPG).

In regard to the Company itself, 3Q11 was marked by the strengthening of process and workplace safety management. The accident rate through September (resulting or not in sick leave) was 1.25 accidents / million man-hours, a 38% year-on-year improvement. The Company's greenhouse gas management also received independent recognition when the BM&FBOVESPA included Braskem in the new Carbon Efficient Index.

Aiming to expand its contribution through increasingly sustainable products, Braskem announced a partnership with Lanxess which will allow this client to produce EPDM (ethylene propylene diene monomer), a raw material for rubber artifacts, partially from renewable raw materials.

Another important period initiative was the conclusion of the educational material on the life cycle of plastics, entitled "Um novo olhar sobre o plástico". The material was distributed to 1,577 schools throughout the country and outlines plastic's positive points, as well as educating the population on what they can do to reduce impact after consumption. These positive points include: a) its lightness, which increases the energetic efficiency of its applications and reduces greenhouse gas emissions; b) its low cost, which permits access to products and services by a greater portion of the population; and c) its durability, which permits reuse and recycling.

Finally, it is worth drawing attention to Braskem's 2010 Annual and Sustainability Report, which contains a details the Company's practices and results in the economic, social and environmental areas, and also its vision of the future and how it can expand its contribution to sustainable development.

▶ OUTLOOK:

At the end of September, the International Monetary Fund (IMF) released a report entitled World Economic Outlook, which reduced projected global GDP growth from 4.3% to 4.0%, mainly due to the worsening of the economic growth scenario, jeopardized by European sovereign debt, leading to slower growth in both the developed and emerging markets. Positive figures related to U.S. GDP growth in the third quarter and the expansion of Chinese industrial activity in October were insufficient to alter the prevailing caution in the short and medium term.

Nevertheless, Brazil remains well positioned within the global context and should still record annual GDP growth of around 3.2% even though the pace has slowed in relation to beginning-of-year expectations. The appreciation of the real and the ICMS tax (state VAT) benefits conceded to importers by the ports with incentives triggered an increase in import volume, seriously jeopardizing several sectors of Brazilian industry (footwear, pulp and paper, equipment, etc.) and acted as a brake on growth. The federal government has adopted measures to try to maintain the competitiveness of local industry and promote its expansion and development through initiatives such as: Plano Brasil Maior, which includes the Reintegro program (export credit); and an attempt to balance the ICMS tax (state VAT) among the various states.

The Brasil Maior Plan was created by the federal government with the intention to create and strengthen the industry competitiveness. For running this, specific committees and boards have been created, focused on different industrial sectors. Braskem is part of the Chemical-Petrochemical Competitiveness Board, together with sector associations.

Additionally, the consistent increase in Brazilian families consumption levels, reflecting higher income and heated labor market (unemployment levels in 3Q11 stood at 6%, the lowest rate since 2002), is expected to remain as an important driver for the growth of the Brazilian economy, leading to a potential increase in the demand for plastics.

In this scenario, Braskem's strategy remains centered on rising its competitiveness through: (i) partnerships with its clients and the sustainability of Brazil's petrochemical and plastics chain; (ii) recovering its local market share; (iii) maximizing operational efficiency through scheduled maintenance shutdowns to improve the productivity of its assets; (iv) constant pursuit of costs reduction; (v) fully capturing synergies in order to add value to the acquired assets; (vi) to add value to existing streams; and (vii) to maintain financial health.

Taking advantage of the volatile international scenario and an eventual reduction in global demand, the Company decided to bring forward a 20-day shutdown of one of the lines in the Camaçari petrochemical complex, which had been originally scheduled for the beginning of 2012, to the second half of November. This decision underlines Braskem's pro-active planning on its assets management, aiming to take full and proper advantage of market opportunities.

Petrochemical industry spreads are expected to remain under pressure in 4Q11 following the global scenario.

In the medium and long term, however, the outlook remains positive. Braskem is therefore maintaining its commitment to sustainable growth and development, and will continue to act proactively in pursuit of the best opportunities, seeking to create value for its shareholders and increase competitiveness throughout the entire petrochemical and plastics production chain, without losing its focus on financial discipline.

Braskem, a world-class Brazilian petrochemical company, is the leader in the thermoplastic resins segment in the Americas and the third-largest Brazilian industrial company owned by the private sector. With 35 industrial plants, 28 of which in Brazil, five in the United States and two in Europe, the Company has an annual production capacity of more than 16 million tons of thermoplastic resins and other petrochemical products.
