¹ Including shares and BDR buybacks. We calculate dividend yield as the announced dividend per share divided by the TSX share price (converted to US\$) on the announcement date (dividend yield = dividend per share / share price at announcement date). The buyback yield is calculated as the total value of shares repurchased in the period divided by the average market capitalization on a given year in each case using the TSX share price converted to US\$ (buyback yield = buybacks reported / average market capitalization for a given year). The dividend yield + buyback yield is the sum of the dividend yield and the buyback yield for the reporting period

² As of August 5, 2025, the Company had 82,629,872 common shares issued and outstanding.

³ Adjusted EBITDA as (Loss) profit for year, plus finance expenses, less other (expense) income, less Change in estimation for mine closure and restoration for properties in care & maintenance, plus depletion and amortization.
