Key:

- (1) The production of the Frade field was affected by a production halt due to maintenance on the offtake line. On September 5th, production was resumed.
- (2) In the Polvo and Tubarão Martelo cluster, production was affected by the shutdown of wells TBMT-8H, TBMT-10H, and TBMT-4H due to the failure of the Submerged Centrifugal Pump. On September 25th, the workover of well TBMT-8H was completed, and the well resumed production. The other wells are still awaiting IBAMA's approval to begin the workover.
- (3) Albacora Leste had its production impacted due to a failure in the gas compressor, which was repaired on September 15th, and production was normalized.
