(1) Starting Q1 2019, the Company changed the components included to calculate the Net Interest Margin ratio ("NIM"). Until 4Q18, it had included interest income and interest expense, as well as results from its investment portfolio. Now, it start adding the exchange rate differences and net gains or losses from currency derivatives.

Accordingly, the NIM ratio captures all of the components of its financial margin. Before, for example, when the Company took peso denominated deposits and granted foreign currency loans with a forward contract to hedge the currency mismatch, its NIM ratio did not include the hedge gain or loss, leading to an inaccurate ratio. The same occurred when the Company took dollar denominated deposits to buy foreign currency securities, its NIM ratio did not include the exchange rate gain or loss from the liabilities adjustment. By incorporating exchange rate differences and derivatives results, the NIM ratio now is more accurate and representative of its financial margin and spreads.

NIM guidance of between 18.5% and 20.5%, compares with NIM of 18.7% reported in 2018.

(2) Starting 2019, Supervielle is providing guidance of Net Income, instead of Comprehensive income. Net Income guidance between AR\$ 3.3 billion to AR\$ 3.9 billion for 2019, compares with AR\$ 2.6 billion Net Income reported in 2018. This implies an YoY increase of between 28% and 52% in 2019.

Note: Apart from above detailed macroeconomic assumptions, this guidance assumes that reserve requirements are kept by the Central Bank at the current levels.
